Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

**autoAccidentals** (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol*      The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is **Section “Score” in *Internals Reference*** then all staves share accidentals, and if *context* is **Section “Staff” in *Internals Reference*** then all voices in the same staff share accidentals, but staves do not.

*procedure*    The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

**context**      The current context to which the rule should be applied.

**pitch**        The pitch of the note to be evaluated.

**barnum**       The current bar number.

**measurepos**    The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

`extraNatural` (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

`harmonicAccidentals` (boolean)

If set, harmonic notes in chords get accidentals.

`keySignature` (list)

The current key signature. This is an alist containing `(step . alter)` or `((octave . step) . alter)`, where `step` is a number in the range 0 to 6 and `alter` a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #'((6 . ,FLAT))`.

`localKeySignature` (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain `((octave . name) . (alter barnumber . measureposition))` pairs.

Properties (write)

#### Section 2.2.1 [`Accidental_engraver`], page 204

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)  
List of different ways to typeset an accidental. For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

*symbol* The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is Section “Score” in *Internals Reference* then all staves share accidentals, and if *context* is Section “Staff” in *Internals Reference* then all voices in the same staff share accidentals, but staves do not.

*procedure* The procedure represents an accidental rule to be applied to the previously specified context. The procedure takes the following arguments:

**context** The current context to which the rule should be applied.

**pitch** The pitch of the note to be evaluated.

**barnum** The current bar number.

**measurepos** The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**internalBarNumber** (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**extraNatural** (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

**harmonicAccidentals** (boolean)

If set, harmonic notes in chords get accidentals.

**keySignature** (list)

The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. **keySignature = #`((6 . ,FLAT))**.

**localKeySignature** (list)

The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

## 2.1.19 Score

This is the top level notation context. No other context can contain a `Score` context. This context handles the administration of time signatures. It also makes sure that items such as clefs, time signatures, and key-signatures are aligned across staves.

You cannot explicitly instantiate a `Score` context (since it is not contained in any other context). It is instantiated automatically when an output definition (a `\score` or `\layout` block) is processed.

This context creates the following layout object(s):

Section 3.1.12 [BarNumber], page 265, Section 3.1.21 [BreakAlignGroup], page 271, Section 3.1.22 [BreakAlignment], page 271, Section 3.1.40 [GraceSpacing], page 288, Section 3.1.53 [LeftEdge], page 297, Section 3.1.62 [MetronomeMark], page 303, Section 3.1.66 [NonMusicalPaperColumn], page 307, Section 3.1.74 [PaperColumn], page 313, Section 3.1.75 [ParenthesesItem], page 313, Section 3.1.80 [RehearsalMark], page 317, Section 3.1.93 [SpacingSpanner], page 326, Section 3.1.105 [SystemStartBar], page 336, Section 3.1.106

This context is built from the following engraver(s):

[Section 2.2.75 \[Parenthesis\\_engraver\]](#), page 229

Parenthesize objects whose music cause has the `parenthesize` property.

This engraver creates the following layout object(s):

[Section 3.1.75 \[ParenthesesItem\]](#), page 313.

[Section 2.2.8 \[Bar\\_number\\_engraver\]](#), page 208

A bar number is created whenever `measurePosition` is zero and when there is a bar line (i.e., when `whichBar` is set). It is put on top of all staves, and appears only at the left side of the staff. The staves are taken from `stavesFound`, which is maintained by [Section 2.2.102 \[Staff\\_collecting\\_engraver\]](#), page 237.

Properties (read)

`currentBarNumber` (integer)

Contains the current barnumber. This property is incremented at every bar line.

`whichBar` (string)

This property is read to determine what type of bar line to create.

Example:

```
\set Staff.whichBar = "|:"
```

This will create a start-repeat bar in this staff only. Valid values are described in [Section “bar-line-interface”](#) in *Internals Reference*.

`stavesFound` (list of grobs)

A list of all staff-symbols found.

`barNumberVisibility` (procedure)

A Procedure that takes an integer and returns whether the corresponding bar number should be printed.

This engraver creates the following layout object(s):

[Section 3.1.12 \[BarNumber\]](#), page 265.

[Section 2.2.105 \[Stanza\\_number\\_align\\_engraver\]](#), page 237

This engraver ensures that stanza numbers are neatly aligned.

[Section 2.2.128 \[Vertical\\_align\\_engraver\]](#), page 243

Catch groups (staves, lyrics lines, etc.) and stack them vertically.

Properties (read)

`alignAboveContext` (string)

Where to insert newly created context in vertical alignment.

`alignBelowContext` (string)

Where to insert newly created context in vertical alignment.

This engraver creates the following layout object(s):

[Section 3.1.124 \[VerticalAlignment\]](#), page 353.

[Section 2.2.41 \[Grace\\_spacing\\_engraver\]](#), page 218

Bookkeeping of shortest starting and playing notes in grace note runs.

Properties (read)

`currentMusicalColumn` (layout object)

Grob that is X-parent to all non-breakable items (note heads, lyrics, etc.).

This engraver creates the following layout object(s):

[Section 3.1.40 \[GraceSpacing\]](#), page 288.

[Section 2.2.98 \[Spacing\\_engraver\]](#), page 236

Make a `SpacingSpanner` and do bookkeeping of shortest starting and playing notes.

Music types accepted:

[Section 1.2.52 \[spacing-section-event\]](#), page 41

Properties (read)

`currentMusicalColumn` (layout object)  
 Grob that is X-parent to all non-breakable items (note heads, lyrics, etc.).

`currentCommandColumn` (layout object)  
 Grob that is X-parent to all current breakable (clef, key signature, etc.) items.

`proportionalNotationDuration` (moment)  
 Global override for shortest-playing duration. This is used for switching on proportional notation.

This engraver creates the following layout object(s):

[Section 3.1.93 \[SpacingSpanner\]](#), page 326.

**Section 2.2.12 [Break\_align\_engraver]**, page 209

Align grobs with corresponding `break-align-symbols` into groups, and order the groups according to `breakAlignOrder`. The left edge of the alignment gets a separate group, with a symbol `left-edge`.

This engraver creates the following layout object(s):

[Section 3.1.21 \[BreakAlignGroup\]](#), page 271, [Section 3.1.22 \[BreakAlignment\]](#), page 271 and [Section 3.1.53 \[LeftEdge\]](#), page 297.

Properties (read)

`automaticBars` (boolean)

```

This will create a start-repeat bar in this staff only. Valid values are described in Section “bar-line-interface” in *Internals Reference*.

`measurePosition` (moment)

**Section 2.2.74 [Paper\_column\_engraver], page 228**

Take care of generating columns.

This engraver decides whether a column is breakable. The default is that a column is always breakable. However, every `Bar_engraver` that does not have a barline at a certain point will set `forbidBreaks` in the score context to stop line breaks. In practice, this means that you can make a break point by creating a bar line (assuming that there are no beams or notes that prevent a break point).

#### Section 2.2.1 [`Accidental_engraver`], page 204

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental. For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

*symbol* The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is Section “Score” in *Internals Reference* then all staves share accidentals, and if *context* is Section “Staff” in *Internals Reference* then all voices in the same staff share accidentals, but staves do not.

*procedure* The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

`context` The current context to which the rule should be applied.

`pitch` The pitch of the note to be evaluated.

**barnum**      The current bar number.

**measurepos**  
The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoCautionaries** (list)  
List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**internalBarNumber** (integer)  
Contains the current barnumber. This property is used for internal timekeeping, among others by the **Accidental\_engraver**.

**extraNatural** (boolean)  
Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

**harmonicAccidentals** (boolean)  
If set, harmonic notes in chords get accidentals.

**keySignature** (list)  
The current key signature. This is an alist containing (*step* . *alter*) or ((*octave* . *step*) . *alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. **keySignature** = **#`((6 . ,FLAT))**.

**localKeySignature** (list)  
The key signature at this point in the measure. The format is the same as for **keySignature**, but can also contain ((*octave* . *name*) . (*alter* *barnumber* . *measureposition*)) pairs.

Properties (write)

### Section 2.2.1 [`Accidental_engraver`], page 204

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used. Each entry in the list is either a symbol or a procedure.

*symbol* The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is Section “Score” in *Internals Reference* then all staves share accidentals, and if *context* is Section “Staff” in *Internals Reference* then all voices in the same staff share accidentals, but staves do not.

*procedure* The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

`context` The current context to which the rule should be applied.

`pitch` The pitch of the note to be evaluated.

`barnum` The current bar number.

`measurepos` The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (`#t . #f`) does not make sense.

`autoCautionaries` (list)

List similar to `autoAccidentals`, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

`internalBarNumber` (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the `Accidental_engraver`.

`extraNatural` (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

`harmonicAccidentals` (boolean)

If set, harmonic notes in chords get accidentals.

`keySignature` (list)

The current key signature. This is an alist containing (`step . alter`) or (`(octave . step) . alter`), where `step` is a number in the range 0 to 6 and `alter` a fraction, denoting alteration. For alterations, use symbols, e.g. `keySignature = #'((6 . ,FLAT))`.

`localKeySignature` (list)

The key signature at this point in the measure. The format is the same as for `keySignature`, but can also contain (`(octave . name) . (alter barnumber . measureposition)`) pairs.

Properties (write)

`localKeySignature` (list)

## 2.2 Engravers and Performers

See Section “Modifying context plug-ins” in *Notation Reference*.

### 2.2.1 Accidental\_engraver

Make accidentals. Catch note heads, ties and notices key-change events. This engraver usually lives at Staff level, but reads the settings for Accidental at Voice level, so you can `\override` them at Voice.

Properties (read)

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol* The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is Section “Score” in *Internals Reference* then all staves share accidentals, and if *context* is Section “Staff” in *Internals Reference* then all voices in the same staff share accidentals, but staves do not.

*procedure* The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

*context* The current context to which the rule should be applied.

*pitch* The pitch of the note to be evaluated.

*barnum* The current bar number.

*measurepos*

The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (*#t . #f*) does not make sense.

*autoCautionaries* (list)

List similar to *autoAccidentals*, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

*internalBarNumber* (integer)

Contains the current barnumber. This property is used for internal timekeeping, among others by the *Accidental\_engraver*.

*extraNatural* (boolean)

Whether to typeset an extra natural sign before accidentals changing from a non-natural to another non-natural.

*harmonicAccidentals* (boolean)

If set, harmonic notes in chords get accidentals.

*keySignature* (list)

The current key signature. This is an alist containing (*step . alter*) or (*octave . step . alter*), where *step* is a number in the range 0 to 6 and *alter* a fraction, denoting alteration. For alterations, use symbols, e.g. *keySignature = #'((6 . ,FLAT))*.

*localKeySignature* (list)

The key signature at this point in the measure. The format is the same as for *keySignature*, but can also contain (*octave . name*) . (*alter barnumber . measureposition*) pairs.

Properties (write)

*localKeySignature* (list)

The key signature at this point in the measure. The format is the same as for *keySignature*, but can also contain (*octave . name*) . (*alter barnumber . measureposition*) pairs.

`associatedVoice` (string)

Name of the `Voice` that has the melody for this `Lyrics` line.

`autoAccidentals` (list)

List of different ways to typeset an accidental.

For determining when to print an accidental, several different rules are tried. The rule that gives the highest number of accidentals is used.

Each entry in the list is either a symbol or a procedure.

*symbol* The symbol is the name of the context in which the following rules are to be applied. For example, if *context* is [Section “Score” in \*Internals Reference\*](#) then all staves share accidentals, and if *context* is [Section “Staff” in \*Internals Reference\*](#) then all voices in the same staff share accidentals, but staves do not.

*procedure* The procedure represents an accidental rule to be applied to the previously specified context.

The procedure takes the following arguments:

`context` The current context to which the rule should be applied.

**pitch**        The pitch of the note to be evaluated.

**barnum**       The current bar number.

**measurepos**  
The current measure position.

The procedure returns a pair of booleans. The first states whether an extra natural should be added. The second states whether an accidental should be printed. (**#t** . **#f**) does not make sense.

**autoBeamCheck** (procedure)

A procedure taking three arguments, *context*, *dir* [start/stop (-1 or 1)], and *test* [shortest note in the beam]. A non-**#f** return value starts or stops the auto beam.

**autoBeamSettings** (list)

**autoBeaming** (boolean)

If set to true then beams are generated automatically.

**autoCautionaries** (list)

List similar to **autoAccidentals**, but it controls cautionary accidentals rather than normal ones. Both lists are tried, and the one giving the most accidentals wins. In case of draw, a normal accidental is typeset.

**automaticBars** (boolean)

If set to false then bar lines will not be printed automatically; they must be explicitly created with a **\bar** command. Unlike the **\cadenzaOn** keyword, measures are still counted. Bar line generation will resume according to that count if this property is unset.

**barAlways** (boolean)

If set to true a bar line is drawn after each note.

If true then reset **measurePosition** when finding a bar check.

**barNumberVisibility** (procedure)

These produce, respectively, a right repeat, a left repeat, a thick double repeat, a thin-thick-thin double repeat, a thin-thick double repeat, a double bar, a start bar, an end bar, a thick double bar, a thin-thick-thin bar, a dotted bar and a dashed bar. In addition, there is an option `||:` which is equivalent to  `|:` except at line breaks, where it produces a double bar (`||`) at the end of the line and a repeat sign ( `|:`) at the beginning of the new line.

If *bartype* is set to `empty` then nothing is printed, but a line break is allowed at that spot. `gap` is used for the gaps in dashed bar lines.

**User settable properties:**

For example, clefs are put after key signatures by setting

```
\override Score.BreakAlignment #'break-align-orders =
  #(make-vector 3 '(span-bar

### 3.2.36 grid-point-interface

A spanning point for grid lines.

This grob interface is used in the following graphical object(s): [Section 3.1.42 \[GridPoint\]](#), [page 289](#).

### 3.2.37 grob-interface

A grob represents a piece of music notation.

All grobs have an X and Y position on the page. These X and Y positions are stored in a relative format, thus they can easily be combined by stacking them, hanging one grob to the side of another, or coupling them into grouping objects.

Each grob has a reference point (a.k.a. parent): The position of a grob is stored relative to that reference point. For example, the X reference point of a staccato dot usually is the note head that it applies to. When the note head is moved, the staccato dot moves along automatically.

A grob is often associated with a symbol, but some grobs do not print any symbols. They take care of grouping objects. For example, there is a separate grob that stacks staves vertically. The [Section 3.1.67 \[NoteCollision\]](#), [page 308](#) object is also an abstract grob: It only moves around chords, but doesn't print anything.

Grobs have properties (Scheme variables) that can be read and set. Two types of them exist: immutable and mutable. Immutable variables define the default style and behavior. They are shared between many objects. They can be changed using `\override` and `\revert`. Mutable properties are variables that are specific to one grob. Typically, lists of other objects, or results from computations are stored in mutable properties. In particular, every call to `set-grob-property` (or its C++ equivalent) sets a mutable property.

The properties `after-line-breaking` and `before-line-breaking` are dummies that are not user-serviceable.

#### User settable properties:

- `X-extent` (pair of numbers)  
Hard coded extent in X direction.
- `X-offset` (number)  
The horizontal amount that this object is moved relative to its X-parent.
- `Y-extent` (pair of numbers)  
Hard coded extent in Y direction.
- `Y-offset` (number)  
The vertical amount that this object is moved relative to its Y-parent.
- `after-line-breaking` (boolean)  
Dummy property, used to trigger callback for `after-line-breaking`.
- `avoid-slur` (symbol)  
Method of handling slur collisions. Choices are `around`, `inside`, `outside`. If unset, scripts and slurs ignore each other. `around` only moves the script if there is a collision; `outside` always moves the script.
- `before-line-breaking` (boolean)  
Dummy property, used to trigger a callback function.
- `color` (list)  
The color of this grob.
- `extra-X-extent` (pair of numbers)  
A grob is enlarged in X dimension by this much.

- extra-Y-extent** (pair of numbers)  
A grob is enlarged in Y dimension by this much.
- extra-offset** (pair of numbers)  
A pair representing an offset. This offset is added just before outputting the symbol, so the typesetting engine is completely oblivious to it. The values are measured in **staff-space** units of the staff's **StaffSymbol**.
- layer** (integer)  
The output layer (a value between 0 and 2): Layers define the order of printing objects. Objects in lower layers are overprinted by objects in higher layers.
- minimum-X-extent** (pair of numbers)  
Minimum size of an object in X dimension, measured in **staff-space** units.
- minimum-Y-extent** (pair of numbers)  
Minimum size of an object in Y dimension, measured in **staff-space** units.
- outside-staff-horizontal-padding** (number)  
By default, an outside-staff-object can be placed so that is it very close to another grob horizontally. If this property is set, the outside-staff-object is raised so that it is not so close to its neighbor.
- outside-staff-padding** (number)  
The padding to place between this grob and the staff when spacing according to **outside-staff-priority**.
- outside-staff-priority** (number)  
If set, the grob is positioned outside the staff in such a way as to avoid all collisions. In case of a potential collision, the grob with the smaller **outside-staff-priority** is closer to the staff.
- rotation** (list)  
Number of degrees to rotate this object, and what point to rotate around. For example, #'(45 0 0) rotates by 45 degrees around the center of this object.
- springs-and-rods** (boolean)  
Dummy variable for triggering spacing routines.
- stencil** (unknown)  
The symbol to print.
- transparent** (boolean)  
This makes the grob invisible.

### Internal properties:

Containing X axis group.
- axis-group-parent-Y** (layout object)  
Containing Y axis group.
- cause** (any type)

- cross-staff** (boolean)  
For a beam or a stem, this is true if we depend on inter-staff spacing.
- interfaces** (list)  
A list of symbols indicating the interfaces supported by this object. It is initialized from the **meta** field.
- meta** (list) Provide meta information. It is an alist with the entries **name** and **interfaces**.
- pure-Y-offset-in-progress** (boolean)  
A debugging aid for catching cyclic dependencies.
- staff-symbol** (layout object)  
The staff symbol grob that we are in.

This grob interface is used in the following graphical object(s): [Section 3.1.110 \[TextScript\]](#), [page 340](#).

**3.2.42 item-interface**

Grobs can be distinguished in their role in the horizontal spacing. Many grobs define constraints on the spacing by their sizes, for example, note heads, clefs, stems, and all other symbols with a fixed shape. These grobs form a subtype called **Item**.

Some items need special treatment for line breaking. For example, a clef is normally only printed at the start of a line (i.e., after a line break). To model this, ‘breakable’ items (clef, key signature, bar lines, etc.) are copied twice. Then we have three versions of each breakable item: one version if there is no line break, one version that is printed before the line break (at the end of a system), and one version that is printed after the line break.

Whether these versions are visible and take up space is determined by the outcome of the **break-visibility** grob property, which is a function taking a direction (-1, 0 or 1) as an argument. It returns a cons of booleans, signifying whether this grob should be transparent and have no extent.

The following variables for **break-visibility** are predefined:

	grob will show:	before	no	after
		break	break	break
<b>all-invisible</b>		no	no	no
<b>begin-of-line-visible</b>		no	no	yes
<b>end-of-line-visible</b>		yes	no	no
<b>all-visible</b>		yes	yes	yes
<b>begin-of-line-invisible</b>		yes	yes	no
<b>end-of-line-invisible</b>		no	yes	yes
<b>center-invisible</b>		yes	no	yes

**User settable properties:****break-visibility** (vector)

A vector of 3 booleans, `#{end-of-line unbroken begin-of-line}`.  
`#t` means visible, `#f` means killed.

**extra-spacing-height** (pair of numbers)

In the horizontal spacing problem, we increase the height of each item by this amount (by adding the ‘car’ to the bottom of the item and adding the ‘cdr’ to the top of the item). In order to make a grob infinitely high (to prevent the horizontal spacing problem from placing any other grobs above or below this grob), set this to `(-inf.0 . +inf.0)`.

**extra-spacing-width** (pair of numbers)

In the horizontal spacing problem, we pad each item by this amount (by adding the ‘car’ on the left side of the item and adding the ‘cdr’ on the right side of the item). In order to make a grob take up no horizontal space at all, set this to `(+inf.0 . -inf.0)`.

**non-musical** (boolean)

True if the grob belongs to a `NonMusicalPaperColumn`.

`space-to-barline` (boolean)

If set, the distance between a note and the following non-musical column will be measured to the bar line instead of to the beginning of the non-musical column. If there is a clef change followed by a bar line, for example, this means that we will try to space the non-musical column as though the clef is not there.

`stem-spacing-correction` (number)

Optical correction amount for stems that are placed in tight configurations. For opposite directions, this amount is the correction for two normal sized stems that overlap completely.

### 3.2.91 spacing-options-interface

Supports setting of spacing variables.

#### User settable properties:

`shortest-duration-space` (dimension, in staff space)

Start with this much space for the shortest duration. This is expressed in `spacing-increment` as unit. See also [Section “spacing-spanner-interface”](#) in *Internals Reference*.

`spacing-increment` (number)

Add this much space for a doubled duration. Typically, the width of a note head. See also [Section “spacing-spanner-interface”](#) in *Internals Reference*.

This grob interface is used in the following graphical object(s): [Section 3.1.40 \[GraceSpacing\]](#), page 288 and [Section 3.1.93 \[SpacingSpanner\]](#), page 326.

### 3.2.92 spacing-spanner-interface

The space taken by a note is dependent on its duration. Doubling a duration adds `spacing-increment` to the space. The most common shortest note gets `shortest-duration-space`. Notes that are even shorter are spaced proportional to their duration.

Typically, the increment is the width of a black note head. In a piece with lots of 8th notes, and some 16th notes, the eighth note gets a 2 note heads width (i.e., the space following a note is a 1 note head width). A 16th note is followed by 0.5 note head width. The quarter note is followed by 3 NHW, the half by 4 NHW, etc.

**User settable properties:**

- `average-spacing-wishes` (boolean)  
If set, the spacing wishes are averaged over staves.
- `base-shortest-duration` (moment)  
Spacing is based on the shortest notes in a piece. Normally, pieces are spaced as if notes at least as short as this are present.
- `common-shortest-duration` (moment)  
The most common shortest note length. This is used in spacing. Enlarging this sets the score tighter.
- `packed-spacing` (boolean)  
If set, the notes are spaced as tightly as possible.
- `shortest-duration-space` (dimension, in staff space)  
Start with this much space for the shortest duration. This is expressed in `spacing-increment` as unit. See also [Section “spacing-spanner-interface” in \*Internals Reference\*](#).
- `spacing-increment` (number)  
Add this much space for a doubled duration. Typically, the width of a note head. See also [Section “spacing-spanner-interface” in \*Internals Reference\*](#).
- `strict-grace-spacing` (boolean)  
If set, main notes are spaced normally, then grace notes are put left of the musical columns for the main notes.
- `strict-note-spacing` (boolean)  
If set, unbroken columns with non-musical material (clefs, bar lines, etc.) are not spaced separately, but put before musical columns.
- `uniform-stretching` (boolean)  
If set, items stretch proportionally to their durations. This looks better in complex polyphonic patterns.

This grob interface is used in the following graphical object(s): [Section 3.1.93 \[SpacingSpanner\]](#), page 326.

**3.2.93 span-bar-interface**

**3.2.94 spanner-interface**

Some objects are horizontally spanned between objects. For example, slurs, beams, ties, etc. These grobs form a subtype called **Spanner**. All spanners have two span points (these must be **Item** objects), one on the left and one on the right. The left bound is also the X reference point of the spanner.

**User settable properties:**

`minimum-length` (dimension, in staff space)

Try to make a spanner at least this long, normally in the horizontal direction. This requires an appropriate callback for the `springs-and-rods` property. If added to a `Tie`, this sets the minimum distance between noteheads.

`to-barline` (boolean)

If true, the spanner will stop at the bar line just before it would otherwise stop.

A pair of numbers. The first number specifies the default length of a beamlet that sticks out of the left hand side of this stem; the second number specifies the default length of the beamlet to the right. ### 3.2.114 tuplet-bracket-interface

A bracket with a number in the middle, used for tuplets. When the bracket spans a line break, the value of `break-overshoot` determines how far it extends beyond the staff. At a line break, the markups in the `edge-text` are printed at the edges.

- `connect-to-neighbor` (pair)  
Pair of booleans, indicating whether this grob looks as a continued break.

- `direction` (direction)  
If `side-axis` is 0 (or `#X`), then this property determines whether the object is placed `#LEFT`, `#CENTER` or `#RIGHT` with respect to the other object. Otherwise, it determines whether the object is placed `#UP`, `#CENTER` or `#DOWN`. Numerical values may also be used: `#UP=1`, `#DOWN=-1`, `#LEFT=-1`, `#RIGHT=1`, `#CENTER=0`.
