

NAME

racount – count things from an **argus(8)** data file/stream.

COPYRIGHT

Copyright (c) 2000-2011 QoSient. All rights reserved.

SYNOPSIS

racount -r argus-file [ra options]

DESCRIPTION

Racount reads **argus** data from an *argus-file* list, and prints out various counts from the data in the file.

OPTIONS

Racount, like all ra based clients, supports a number of **ra options** including filtering of input argus records through a terminating filter expression. See **ra(1)** for a complete description of **ra options**.

EXAMPLE INVOCATION

racount -r argus.file

racount	records	total_pkts	src_pkts	dst_pkts	total_bytes	src_bytes	dst_bytes
sum	279	1112	661	451	165567	94561	71006

AUTHORS

Carter Bullard (carter@qosient.com).
