NAME

   texdoc – manual page for texdoc version: 0.4

SYNOPSIS

   texdoc *-h, --help | -V, --version | [option(s)] name(s)*

DESCRIPTION

   −h, **−−help**

   Show this short help.

   −v, **−−version**

   Print the version of the program.

   −e, **−−extensions**=*L*

   Require file extensions to be in the list L.

   −w, **−−view**

   Use view mode: start a viewer.

   −m, **−−mixed**

   Use mixed mode (view or list).

   −l, **−−list**

   Use list mode: don't start a viewer.

   −s, **−−search**

   Search for name as a substring.

   −r, **−−regex**

   Search for name as a lua regex.

   −a, **−−alias**

   Use the alias table.

   −A, **−−noalias**

   Don't use the alias table.

   −i, **−−interact**

   Use interactive menus.

   −I, **−−nointeract**

   Use plain lists, no interaction required.

   −n, **−−noise−level**=*N*

   Set verbosity level to N.

   The command 'texdoc texdoc' gives you the full user guide in pdf. Please report bugs and
   request features at texlive AT tug.org.
