5.5	Inner news	25

1 Introduction

paperT_EX class is a L^AT_EX 2_E class that allows you to create a paperT_EX newspaper. The output document has a front page and as many inner pages as desired. News appear one after another, telling the type, number of columns, heading, subheading, images, author and so forth. It is possible to change the aspect of (almost) everything therefore it is highly customizable. Commands to add different titles, headings and footers are also provided.

This class uses features from many other L^AT_EX packages and creates new commands and environments to create your own publication. I decided to write my own class because of my language problems using a plain T_EX class called **newsletr** by Hunter Goatley. I have used paperT_EX working together with a Perl script that fills the whole T_EX source file with database information and compiles the document obtaining a PDF. This process does not require any designer or programmer thus you could use paperT_EX in a blog or website system.

This manual is typeset according to the conventions of the L^AT_EX DOCSTRIP utility which enables the automatic extraction of the L^AT_EX macro source files.

Section 2 describes the usage of the class.

2 Usage

To create a paperT_EX newspaper just load the class as usual, with

```
\documentclass[class-options]{papertex}
```

at the beginning of your your L^AT_EX 2_E source file. The [*class-options*] are as described in section 4.

From this point it is possible to include packages and renew class commands described in section 3.

2.1 Front page

frontpage As every newspaper, paperT_EX has its own front page. It includes main headings, an index, the newspaper logo and other useful information. This environment should be the first you use within paperT_EX class but it is not mandatory, maybe you just want to create a newsletter.

\firstimage The first two commands you can use inside the **frontpage** environment are **\firstimage** and **\firstnews** which include, respectively, the main image and the main heading in the front page. The first one takes two arguments *<image>* and *<description>*. Notice that second argument is optional and it declares the image caption; *<image>* defines the relative path to the image. In order to include the first piece of news use

```
\firstnews{\langle title\rangle}{\langle opening\rangle}{\langle time\rangle}
```

first two arguments are mandatory and represent the heading and the opening paragraph. Las argument is optional (you can leave it blank) and indicates the time when news happened.

\secondnews The second piece of news is included using the command **\secondnews** just as the first news. The main differences are that this second piece has two more arguments and it does not include an image.

```
\secondnews{\langle title\rangle}{\langle subtitle\rangle}{\langle opening\rangle}{\langle pagesof\rangle}{\langle time\rangle}
```

The new arguments $\langle subtitle \rangle$ and $\langle pagesof \rangle$ define a subtitle and the name of the section for this piece of news.

\thirdnews The third piece of news is the last one in the paper \TeX front page. It works like the **\secondnews** command but it is possible to include an image within the text.

```
\thirdnews{\langle title \rangle}{\langle subtitle \rangle}{\langle opening \rangle}{\langle image \rangle}{\langle pagesof \rangle}{\langle time \rangle}
```

Where $\langle image \rangle$ indicates the relative path to the image. The other arguments meaning is the same as **\secondnews** command.

indexblock The front page includes three information blocks besides the news: **indexblock** which contains the index, **authorblock** which includes information about the author and a **weatherblock** containing a weather forecast. All these three environments are mostly a frame in the front page therefore they can be redefined to fit your personal wishes but I kept them to give an example and to respect the original paper \TeX format.

\indexitem The **indexblock** environment contains a manually edited index of paper \TeX . It takes one optional argument $\langle title \rangle$ that places a title over the index block. To add entries inside the index just type

```
\indexitem{\langle title \rangle}{\langle reference \rangle}
```

inside the environment. The $\langle title \rangle$ is the index entry text and the $\langle reference \rangle$ points to a news inside paper \TeX . It will be more clear when you read subsection 2.2. In order to get a correct output, it is necessary to leave a blank line between index items.

The **authorblock** environment can include whatever you would like. I called it **authorblock** because I think it is nice to include some author reference in the front page: who you are, why are you doing this... This environment creates a frame box in the bottom right corner of the front page with your own logo at the top.

\weatheritem Finally, the **weatherblock** lets you include a weather forecast. It takes one optional argument $\langle title \rangle$ that places a title over the weather block. It can fit up to three weather icons with maximum and minimum temperatures, description and name. To add each of the weather entries type the following

```
\weatheritem{\langle image \rangle}{\langle day-name \rangle}{\langle max \rangle}{\langle min \rangle}{\langle short-desc \rangle}
```

The first argument indicates the path to the weather icon (i.e. sunny or snow)¹, $\langle day-name \rangle$ like Monday, $\langle max \rangle$ and $\langle min \rangle$ are the highest and lowest day temperatures and $\langle short-desc \rangle$ is a brief description of the weather conditions: partly cloudy, sunny and windy...

2.2 Inside

Once we have created the front page we should include all news inside our newspaper. paper \TeX arranges all news one after each other, expanding headings all over

¹You can download a nice weather icon-set from <http://www.weather.com>.

the page and splitting the news text in the number of columns we wish. There are three different environments to define a piece of news: the `news` environment described in section 2.2.1, the `editorial` environment 2.2.2 for opinion news and the `shortnews` environment explained in 2.2.3.

2.2.1 The news environment

- `news` The main environment to include a piece of news is called `news`. It takes five arguments that set up the headings and structure of the news.

```
\begin{news}{\num-of-columns}{\title}{\subtitle}{\pagesof}{\label}
...{\text} ...
\end{news}
```

The first argument `\num-of-columns` sets the number of columns the news will be divided whereas `\label` is used when pointing a news from the index in the front page. The rest of the arguments are easy to understand.

Inside the `news` environment, besides the main text of the news, it is possible to include additional information using several class commands.

`\authorandplace`
`\timestamp`

The `\authorandplace{\author}{\place}` inserts the name of the editor and the place where the news happened in the way many newspapers do. Another useful command is `\timestamp{\time}` which includes the time and a separator just before the text. These two commands should be used before the text because they type the text at the same place they are executed.

`\image`

To include images within the text of a news, paperTeX provides an `\image` command. Since `multicol` package does not provide any float support for its `multicol` environment, I created a macro that includes an image only if that is possible, calculating if there is enough space for the image. It is not the best solution but it works quite well and I could not find a better one. To include an image use the command and its two arguments: the relative path to the image and a short description.

```
\image(\image){\description}
```

`\columnntitle`
`\expandedtitle`

Within the text of the news, it is possible to add column and expanded titles. The main difference between them is that the first one keeps inside the width of a news column whereas the second expands all over the width of the page, breaking all the columns. Their use is analogous, as follows

```
\columnntitle{\type}{\text}
\expandedtitle{\type}{\text}
```

These two commands use `fancybox` package features. That's why there are five different types of titles which correspond mainly with `fancybox` ones: `shadowbox`, `doublebox`, `ovalbox`, `Ovalbox` and `lines`.

2.2.2 The editorial environment

- editorial** In addition to the **news** environment, one can use the **editorial** environment to create editorial or opinion texts. The main feature is that it transforms the style of the heading. Although this environment accepts all the commands **news** takes, it does not make any sense to use the **\authorandplace** command within it since it includes an author argument. To create an editorial text use

```
\begin{editorial}{<num-of-columns>}{<title>}{<author>}{<label>}\dots{<text>}...\end{editorial}
```

All arguments have the same meaning as **news** environment (see 2.2.1).

2.2.3 The shortnews environment

- shortnews** The **shortnews** environment creates a block of short news. Although it has its own title and subtitle, each piece of news within it may have a title. To use it just type:

```
\begin{shortnews}{<num-of-columns>}{<title>}{<subtitle>}{<label>}\dots\shortnewsitem{<title>}{<text>}...\end{shortnews}
```

You can also specify the number of columns of the block like **editorial** and **news** environments. To add a piece of news inside the **shortnews** use the **\shortnewsitem**, indicating a title and the text of the issue.

2.2.4 Commands between news

- \newssep** There are two commands you can use among the news inside paperTeX: **\newssep** and **\newsection**. The first one does not take any parameter and just draws a line between two news. The second creates a new PDF bookmark and changes the content of **\papertex@section** to the new **<section name>**. From the point it is used, all news which follow will be grouped within the new section.

```
\newsection{<section name>}
```

3 Customization

paperTeX includes many commands which can be used to customize its aspect, from the front page to the last page. I will list them grouped so it is easy to find them. Treat them as standard L^AT_EX commands, using **\renewcommand** to change their behaviour.

Front page

\logo	When creating a newspaper, everyone wants to show its own logo instead of paperTeX default heading. To achieve this, you can proceed in two different ways: redefining the entire \logo command or redefining \logo to \mylogo which takes one mandatory argument, <i><whatever></i> , and keeps the edition name, date and time in the heading space just under <i><whatever></i> . You can, for example, insert an image (height up to 1.5cm / 0.6in) or some formatted text. Another command relating to your logo is \minilogo which defines the small logo that appears inside the <i>airlock's</i> (see 2.1).
\mylogo	
\minilogo	
\edition	The edition text has to be declared in the preamble of the document. One important thing to know is that \author, \date and \title have no effect inside paperTeX since the newspaper date is taken from \today command and the other two are only for the title page (if using \maketitle).
\editionFormat	
\indexFormat	When defining the index in the front page, there are several commands to customize the final index style. \indexFormat sets the format of the title; \indexEntryFormat, the format of each index entry; \indexEntryPageTxt and \indexEntryPageFormat lets you define which is the text that goes with the page number (i.e. page, p., págs.) and its format. Finally, paperTeX creates a thin line between index entries, you can redefine it using \indexEntrySeparator. To get the index with papertex@indexwidth is provided.
\indexEntryFormat	
\indexEntryPageTxt	
\indexEntryPageFormat	
\indexEntrySeparator	
\weatherFormat	Relating to the weather block, the title format can be changed redefining \weatherFormat. In order to customize the format of the temperature numbers and their units it is necessary to redefine \weatherTempFormat and \weatherUnits respectively.
\weatherTempFormat	
\weatherUnits	
TitleFormat	The main news that appear in the front page can change their formats. To obtain that there are three standard commands to modify the title, subtitle and text style. You just have to replace the star () with first, second or third depending on which news you are editing. Note that first piece of news has no subtitle therefore it does not make any sense to use the non-existent command \firstSubtitleFormat.
*SubtitleFormat	
*TextFormat	
\pictureCaptionFormat	Two other elements to configure are the picture captions and the pages or section format in the entire document. To proceed just redefine the macros \pictureCaptionFormat and \pagesFormat.
\pagesFormat	

Inside the newspaper

\innerTitleFormat	The news inside paperTeX may have a different format from the ones in the front page. To change their title or subtitle format redefine \innerTitleFormat and \innerSubtitleFormat. The news text format matches the document general definition. When using the \authorandplace command, you might want to change the default style. Just renew \innerAuthorFormat and \innerPlaceFormat to get the results.
\innerSubtitleFormat	
\innerAuthorFormat	
\innerPlaceFormat	
\innerTextFormat	
\timestampTxt	The \timestamp command described in section 2.2.1 lets you introduce the time of the event before the news text. You can configure its appearance by altering several commands: \timestampTxt which means the text after the timestamp (i.e.
\timestampSeparator	
\timestampFormat	

\innerTextFinalMark

h., hours, secs.); \timestampSeparator which defines the element between the actual timestamp and the beginning of the text and, finally, \timestampFormat to change the entire timestamp format.

Most of the newspaper in my country (Spain) finish the news text with a black square (■). As I wanted to create a highly customizable L^AT_EX class I added the macro \innerTextFinalMark to change this black square. This item will appear always following the last character of the text with the ~ character.

\minraggedcols
\raggedFormat

The \minraggedcols counter is used to tell paperT_EX when news text should be ragged instead of justified. The counter represents the minimum number of columns that are needed in order to use ragged texts. For example, if \minraggedcols is set to 3, all news with 3 columns or more will be ragged. News with 1, 2 columns will have justified text. By default, \minraggedcols is set to 4.

The \raggedFormat macro can be redefined to fit user ragged style. Default value is \RaggedRight.

\heading
\foot

paperT_EX includes package fancyhdr for changing headings and footers. Although it is possible to use its own commands to modify paperT_EX style, there are two commands to change headings and foot appearance. Place them in the preamble of your paperT_EX document.

```
\heading{\left}{\center}{\right}  
\foot{\left}{\center}{\right}
```

If you still prefer to use fancyhdr macros, use them after the frontpage environment.

4 Class options

The paperT_EX class is in itself an alteration of the standard article class, thus it inherits most of its class options but `twoside`, `twocolumn`, `notitlepage` and `a4paper`. If you find problems when loading other article features, please let me know to fix it.

There are also five own options that paperT_EX implements.

a3paper (*false*) This option makes paperT_EX 297mm width by 420mm height. This option is implemented because the standard article class does not allow this document size.

9pt (*false*) Allows the 9pt font size that article class does not include (default is 10pt).

hyphenatedtitles (*false*) Forces heading titles to be hyphenated. This feature is off by default because most of newspapers prefer not to hyphenate them.

columnlines (*false*) Adds lines between columns in the entire paperT_EX. The default line width is 0.1pt but it is possible to change this by setting length \columnlines in the preamble.

showgrid (*false*) This option is only for developing purposes. Because the front page has a personal design using the `textpos` package, I created this grid to make easier the lay out.

5 Implementation

This section deals with the package source code. Please, do not read this unless you really need it. The comments are very short and they, generally, just tell you where you are. If you are experiencing any problems when testing this class, you could send me an email and I would try to solve it.

Of course, I am also pleased to receive emails telling me what is wrong in this code or what I should improve. It would be great!

5.1 Init, packages and options

First define paperTeX class.

1 `\NeedsTeXFormat{LaTeX2e}`

2 `\ProvidesClass{papertex}[2006/07/06 paperTeX class]`

Require `ifthen` package which will be very useful.

3 `\RequirePackage{ifthen}`

Define some lengths for page sizes.

4 `\newlength{\papertex@imgsize}`

5 `\newlength{\papertex@coltitsize}`

6 `\newlength{\papertex@pageneed}`

7 `\newlength{\papertex@pageleft}`

8 `\newlength{\papertex@indexwidth}`

Keep track of the number of columns of the piece of news we are in.

9 `\newcommand{\papertex@ncolumns}{0}`

Lines between columns. This is a `multicol` package feature.

10 `\newlength{\columnlines}`

11 `\setlength{\columnlines}{0 pt} % no lines by default`

Define some booleans to control paperTeX class options like hyphenated titles in front page, nine points font or front page grid.

12 `\newboolean{papertex@hyphenatedtitles}`

13 `\setboolean{papertex@hyphenatedtitles}{true}`

14 `\newboolean{papertex@ninepoints}`

15 `\setboolean{papertex@ninepoints}{false}`

16 `\newboolean{papertex@showgrid}`

17 `\setboolean{papertex@showgrid}{false}`

18 `\newboolean{papertex@a3paper}`

19 `\setboolean{papertex@a3paper}{false}`

Some booleans to keep track of where we are.

20 `\newboolean{papertex@insidefrontpage}`

21 `\setboolean{papertex@insidefrontpage}{false}`

```

22 \newboolean{papertex@insideweather}
23 \setboolean{papertex@insideweather}{false}
24 \newboolean{papertex@insideindex}
25 \setboolean{papertex@insideindex}{false}

```

These counters are needed for creating the front page virtual grid which comes from the *absolute* option of the `textpos` package.

```

26 \newcount\papertex@gridrows
27 \newcount\papertex@gridcolumns
28 \papertex@gridrows=40
29 \papertex@gridcolumns=50

```

The following count defines when paper \TeX should use ragged text instead of justified text. It represents the maximum number of columns not ragged. Default value is 5.

```

30 \newcount\minraggedcols
31 \minraggedcols=5

```

Now, we declare the class options. First, all the options which paper \TeX inherits from “article.cls” standard class.

```

32 \DeclareOption{10pt}{\PassOptionsToClass{10pt}{article}}
33 \DeclareOption{11pt}{\PassOptionsToClass{11pt}{article}}
34 \DeclareOption{12pt}{\PassOptionsToClass{12pt}{article}}

```

Second, options paper \TeX does not inherit from “article.cls”.

```

35 \DeclareOption{twocolumn}%
36 {\ClassWarning{paperTeX}{Option 'twocolumn' not available for paperTeX.}}
37 \DeclareOption{notitlepage}%
38 {\ClassWarning{paperTeX}{Option 'notitlepage' not available for paperTeX.}}
39 \DeclareOption{twoside}%
40 {\ClassWarning{paperTeX}{Option 'twoside' not available for paperTeX.}}

```

Finally, paper \TeX own options.

```

41 \DeclareOption{9pt}{\setboolean{papertex@ninetpoints}{true}}
42 \DeclareOption{hyphenatedtitles}{\setboolean{papertex@hyphenatedtitles}{false}}
43 \DeclareOption{columnlines}{\setlength{\columnlines}{0.1 pt}}
44 \DeclareOption{showgrid}{\setboolean{papertex@showgrid}{true}}
45 \DeclareOption{a3paper}{\setboolean{papertex@a3paper}{true}}

```

As paper \TeX is based in the L^AT_EX “article” class, we load this class with default paper \TeX options.

```

46 \ProcessOptions\relax
47 \LoadClass[10pt, onecolumn, titlepage, a4paper]{article}

```

From this point, paper \TeX requires all packages needed.

```

48 \RequirePackage{ifpdf}
49 \RequirePackage{multido}
50 \RequirePackage{datetime}
51 \RequirePackage{multicol}
52 \RequirePackage{fancyhdr}
53 \RequirePackage{fancybox}

```

New feature
v1.2a

Define margins using `geometry` package to get as much as possible from the page layout. It is also time to check if “a3paper” option is requested.

```
54 \ifthenelse{\boolean{papertex@a3paper}}{%
55 \RequirePackage[a3paper,headsep=0.5cm,vmargin={2cm,2cm},hmargin={1.5cm,1.5cm}]{geometry}%
56 }{%
57 \RequirePackage[headsep=0.5cm,vmargin={2cm,2cm},hmargin={1.5cm,1.5cm}]{geometry}%
58 }
```

Some requirements whether we compile using PDFLATEX or just LATEX.

```
59 \ifpdf
60 \RequirePackage[pdftex]{graphicx,color}
61 \RequirePackage[pdftex]{hyperref}
62 \else
63 \RequirePackage{color}
64 \RequirePackage[dvips]{graphicx}
65 \RequirePackage[dvips]{hyperref}
66 \fi
```

Some more packages...

```
67 \RequirePackage[absolute]{textpos} % absoulte positioning
68 \RequirePackage{hyphenat} % when hyphenate
69 \RequirePackage{wrapfig}
70 \RequirePackage{lastpage} % to know the last page number
71 \RequirePackage{setspace} % set space between lines
```

New feature
2007/01/25

We, now, load `ragged2e` package in order to provide paperTEX with nicely ragged texts. A new command called `\raggedFormat` is defined to control which kind of ragged format should be used.

```
72 \RequirePackage{ragged2e}
73 \newcommand{\raggedFormat}{\RaggedRight}
```

When the whole class is loaded, draw the front page grid. Draw lines if requested by using `showgrid` option. There is also a subtraction from `\minraggedcols` counter by one in order to match is definition.

```
74 \AtEndOfClass{\papertexInit}
75 \ifthenelse{\boolean{papertex@showgrid}}{%
76 \AtBeginDocument{
77 \grid[show]{\papertex@gridrows}{\papertex@gridcolumns}}
78 \advance\minraggedcols by -1
79 }{%
80 \AtBeginDocument{
81 \grid[]{\papertex@gridrows}{\papertex@gridcolumns}}
82 \advance\minraggedcols by -1
83 }
```

Definition of `ninepoints` class option.

```
84 \ifthenelse{\boolean{papertex@ninepoints}}{%
85 \renewcommand{\normalsize}{%
86 \setfontsize{\normalsize}{9pt}{10pt}%
87 \setlength{\abovedisplayskip}{5pt plus 1pt minus .5pt}%
88 \setlength{\belowdisplayskip}{\abovedisplayskip}%
}}
```

```

89  \setlength{\abovedisplayshortskip}{3pt plus 1pt minus 2pt}%
90  \setlength{\belowdisplayshortskip}{\abovedisplayshortskip}%
91
92 \renewcommand{\tiny}{\@setfontsize{\tiny}{5pt}{6pt}}
93
94 \renewcommand{\scriptsize}{\@setfontsize{\scriptsize}{7pt}{8pt}}
95
96 \renewcommand{\small}{%
97  \@setfontsize{\small}{8pt}{9pt}%
98  \setlength{\abovedisplayskip}{4pt plus 1pt minus 1pt}%
99  \setlength{\belowdisplayskip}{\abovedisplayskip}%
100 \setlength{\abovedisplayshortskip}{2pt plus 1pt}%
101 \setlength{\belowdisplayshortskip}{\abovedisplayshortskip}%
102
103 \renewcommand{\footnotesize}{%
104  \@setfontsize{\footnotesize}{8pt}{9pt}%
105  \setlength{\abovedisplayskip}{4pt plus 1pt minus .5pt}%
106  \setlength{\belowdisplayskip}{\abovedisplayskip}%
107  \setlength{\abovedisplayshortskip}{2pt plus 1pt}%
108  \setlength{\belowdisplayshortskip}{\abovedisplayshortskip}%
109
110 \renewcommand{\large}{\@setfontsize{\large}{11pt}{13pt}}%
111 \renewcommand{\Large}{\@setfontsize{\Large}{14pt}{18pt}}%
112 \renewcommand{\LARGE}{\@setfontsize{\LARGE}{18pt}{20pt}}%
113 \renewcommand{\huge}{\@setfontsize{\huge}{20pt}{25pt}}%
114 \renewcommand{\Huge}{\@setfontsize{\Huge}{25pt}{30pt}}%
115 }{}}

```

```

Formatting the heading date. This macro uses `datetime` package. I did some modifications on “`datetime.sty`” file in order to satisfy my own need but I do not think people should change anything.

```

775 \renewcommand{\date}{%
776 \longdate{\today}%
777 }

```

The next macro types out the author and the place of the news. It is just a format command.

```

778 \newcommand{\authorandplace}[2]{%
779 \leftline{%
780 {\innerAuthorFormat #1},\space{}{\innerPlaceFormat #2}%
781 }%
782 \par %
783 }

```

New section macro creates a new PDF bookmark and keeps track of which section we are. This is useful because we would like to print out the section name on all page headings.

```

784 \newcommand{\newsection}[1]{%
785 \pdfbookmark[0]{#1}{\thepage} %bookmark para el pdf
786 \renewcommand{\papertex@section}{#1}
787 }

```

Inner news environment. This environment creates a piece of news inside the newspaper. It creates a `multicol` environment in the opening and ends it at closing. It also uses `multicol` feature to expand the news headings all over the columns and creates a new PDF bookmark and label.

The fifth parameter gets the name of the label that the user can use in the front page index. It uses `\phantomsection` to make `\pageref` work. Notice that paperTeX has not any sections.

It tells `multicols` environment that it should appear *4cm* of text at least. Otherwise, it changes to a new page.

```

788 \newenvironment{news}[5]
789 {
790 \papertex@say{Adding a new piece of news}

```

```

791 \renewcommand{\papertex@ncolumns}{#1}
792 \begin{multicols}{#1}[%  

793 \papertex@pages{#4}%
794 \papertex@innerTitle{#2}%
795 \papertex@innerSubtitle{#3}%
796 ][4cm]%
797 \phantomsection
798 \pdfbookmark[1]{#2}{\thepage}
799 \label{#5}
800 \ifnum #1 > \minraggedcols
801 \raggedFormat
802 \fi
803 }
804 {\`{ }\papertex@innerTextFinalMark{}}
805 \end{multicols}
806 }

```

Thin line to put between news. The line will not show up if there is not enough space. For example, it will never appear at the top of a new page.

```

807 \newcommand{\newssep}{%
808 \setlength{\papertex@pageneed}{16000pt}
809 \setlength{\papertex@pageleft}{\pagegoal}
810 \addtolength{\papertex@pageleft}{-\pagetotal}
811
812 \papertex@say{How much left \the\papertex@pageleft}
813
814 \ifdim \papertex@pageneed < \papertex@pageleft
815 \papertex@say{Not enough space}
816 \else
817 \papertex@say{Adding sep line between news}
818 \vspace*{10pt plus 10pt minus 5pt}
819 \hrule
820 \vspace*{10pt plus 5pt minus 5pt}
821 \fi
822
823 }

```

Next command inserts the opinion news heading. It is very different from normal news. I writes the title, a thin line and the author (usually in small caps). It uses a tabular in order the line as wide as the titles.

```

824 \newcommand{\papertex@editorialTit}[2]{%
825 \setlength{\arrayrulewidth}{.1pt}
826 \begin{center}
827 \begin{tabular}{c}
828 \noindent
829 \papertex@editorialTitle{#1}
830 \vspace{2pt plus 1pt minus 1pt}
831 \\
832 \hline
833 \vspace{2pt plus 1pt minus 1pt}

```

```

834 \\
835 \editorialAuthorFormat{#2}
836 \end{tabular}
837 \end{center}
838 }

```

Next environment introduces a new opinion news. It tells `multicols` environment that it should appear 4cm of text at least. Otherwise, it changes to a new page.

```

839 \newenvironment{editorial}[4]
840 {
841 \papertex@say{Adding a new editorial}
842 \begin{multicols}{#1}[%
843 \papertex@editorialTit{#2}{#3}%
