# The bookest class

Version 1.0.4 — May 22, 2007  
Riccardo Bresciani

---

**March 20, 2008: WARNING** This document is out of date, the newest features are documented only in the Italian version of this document.

The bookest class is an extension of the standard book class, on which it relies and that is loaded with the default options.

The extensions provided by the class involve:

1. colors;
2. document layout;
3. headings and footers;
4. title page layout;
5. ...

The bookest web page is <http://tex.boris-web.net/bookest>.

## 1. Colors

bookest requires the `color` and the `pdfcolmk`<sup>1</sup> packages to provide color support to the document.

Specifically, colors A and B are defined: they will be used in the definition of the sectioning commands and in coloring of some text elements — e.g. the `footnote` rules or the list labels in `itemize`, `enumerate` e `description`.

The default document is black and white, the user can anyway define the colors according to his taste by using the commands listed in 1.1.

bookest provides some preset color combinations that can be activated with the corresponding class options listed in 1.2. For these options to be used the `hyperref` package is required, as link and anchor colors (color A) and citation color (color B) are set.

### 1.1 Commands

`\colorA`, `\colorB`, `\black` declare the colors used by the class (A and B empty by default and user-definable, plus black);

---

<sup>1</sup>This package, reported by Massimiliano Dominici (GUR), allows to bypass some of the limitations that pdfTeX has up to version 1.30, mainly the unsupported `colorstack`. Currently the package is loaded by default, but as soon as the main distributions (MiKTeX, TeXlive, ...) will have pdfTeX versione 1.40 this package will be removed from the class.

`\setcolorA{<R> <G> <B>}, \setcolorB{<R> <G> <B>}` specify color A and B in RGB format;  
`\SETcolorA{<command>}, \SETcolorB{<command>}` redefine the commands `\colorA` and `\colorB` in `<command>`;

## 1.2 Options

`noitemcolor` cancels the list coloration in `itemize`, `enumerate` and `description`;

`blue`, `green`, `red` are generic color themes;

`guitgreen` is a color theme using the colors of the Gruppo Utilizzatori Italiani di TeX (GUT).

`sssupcolor1`, `sssupcolor2`, `sssupcolor3` are color themes using the colors of the Scuola Superiore Sant'Anna logo;

`enscblue` is a color theme using the colors of the École Normale Supérieure de Cachan logo.

## 2. Document layout

bookest provides options to control:

- `doubleside` (inherits that ones of `book`);
- margins;
- line spacing;
- paragraph indentation and spacing.

Moreover, bookest provides two commands to insert an image or a text as shipout picture.

### 2.1 Options

`oneside`, `twoside` toggles duplex options (default: `twoside`);

`centered` sets page margins (2.5 cm horizontal, 3 cm above and below) — requires the `geometry` package;

`left5mm` sets page margins allowing 5 mm for binding (3 cm left, 2 cm right and 3 cm above and below) — requires the `geometry` package;

`left8mm` sets page margins allowing 8 mm for binding (3.3 cm left, 1.7 cm right and 3 cm above and below) — requires the `geometry` package;

`onehalfspacing` line spacing to 1.5 — requires the `setspace` package;

`doublespacing` line spacing to 2 — requires the `setspace` package;

`noparindent` sets paragraph indentation to 0;

`noparskip` sets paragraph spacing to 0.

## 2.2 Commands

**\shipouttext{<rot>}{<sc>}{<text>}** puts in every page the text *<text>* as shipout picture, rotating it counterclockwise by *<rot>* degrees and applying a scale factor *<sc>*. The default color is gray 5% — requires the `setspace` package — requires the `everyshi` and `color` packages;

**\shipoutimage{<options>}{<file>}** puts in everypage the image *<file>* as shipout picture, using *<options>* as `\includegraphics` options — requires the `everyshi` and `graphicx` packages.

## 3. Headings and footers

bookest provides commands to allow the user to set easily headings and footers. Moreover it provides a default setting that is different from book<sup>2</sup>.

It also redefines chapter headings and the plain style to include colors.

### 3.1 Commands

**\setoddhead, \sevevenhead** define odd and even page headings;

**\oddheadtext** is the text to be used in odd page headings (default: `\colorA{\slshape\rightmark}\hfill\the`

**\evenheadtext** is the text to be used in even page headings (default in the oneside case: `\oddheadtext`; in the twoside case: `\colorA{\thepage\hfill\slshape\leftmark}`);

**\setoddheadtext, \sevevenheadtext** set the text in `\oddheadtext` e `\evenheadtext`;

**\setoddfoot, \sevevenfoot** define odd and even page footers;

**\oddfoottext, \evenfoottext** is the text to be used in odd and even page headings (default: (default: empty);

**\setoddfoottext, \sevevenfoottext** set the text in `\oddfoottext` e `\evenfoottext`;

**\setleftmark, \setrightmark** sets the text in `\leftmark` e `\rightmark`;

**\makeheadrule** defines the horizontal rule in headings (default: `\colorB\hrule \@width \textwidth \@height 0.4pt \vskip-0.4pt`);

**\makefootrule** defines the horizontal rule in headings (default: `\makeheadrule`);

## 4. Title page layout

bookest provides commands to allow the user to customize easily the title page of his document, especially starting from preset layouts that can be activated by the options in 4.2.

The default layout has author and title centered at top of the page and to the bottom of the page is a footer made by the content of `\titlingpageprefooter` and of `\titlingpagefooter` divided by a horizontal line. Between title and footer is the content of `\titlingpagemiddle`.

The different options allow to vary the logo position; for each option *<optlogo>* in 4.2 there exists a variant *<optlogo>-nofooter* where no footer is present.

---

<sup>2</sup>To use the default book styles one has to simply use the command `\pagestyle{<style>}`.

## 4.1 Commands

**\inslogo{<file>}** inserts the image <file> with \includegraphics options previously defined and used for the logo (default: width=0.6\paperwidth);

**\setlogooptions{<options>}** defines <options> as the \includegraphics options to be used by \inslogo;

**\logo, \leftlogo, \rightlogo** are the path (relative or absolute) of the image to be used as logo depending on the chosen options (default for \logo is the relative path logo, default for the others is \logo);

**\setlogo{<path>}, \setleftlogo{<path>}, \setrightlogo{<path>}** set to <path> the content of \logo, \leftlogo, \rightlogo;

**\titlingpagemiddle** is the text to be put in the middle of the *titling page*;

**\settitingpagemiddle** sets the text in \titlingpagemiddle;

**\titlingpageprefooter** is the text to be put before the footer in the *titling page*;

**\settitingpageprefooter** sets the text in \titlingpageprefooter;

**\titlingpagefooter** is the text to be used as footer in the *titling page* (default: \today);

**\settitingpagefooter** sets the text in \titlingpagefooter;

**\settitingpagetitle** defines the format of the title in the *titling page*;

**\titling** inserts the *titling page*.

## 4.2 Options

**nofooter** variant without footer of the default layout;

**logo, logo-nofooter** adds to the default layout the logo in \logo under the title (and matching nofooter variant) — requires the graphicx package;

**logo-bg, logo-bg-nofooter** adds to the default layout the logo in \logo in the background (and matching nofooter variant) — requires the graphicx and the eso-pic packages;

**logo-topl, logo-topl-nofooter** adds to the default layout the logo in \leftlogo at top left of the page before the title (and matching nofooter variant) — requires the graphicx package;

**logo-topc, logo-topc-nofooter** adds to the default layout the logo in \logo at top center of the page before the title (and matching nofooter variant) — requires the graphicx package;

**logo-topr, logo-topr-nofooter** adds to the default layout the logo in \rightlogo at top left of the page before the title (and matching nofooter variant) — requires the graphicx package;

**logo-toplr, logo-toplr-nofooter** adds to the default layout the logo in \leftlogo at top left of the page and \rightlogo at top right of the page before the title (and matching nofooter variant) — requires the graphicx package;

## 5. Miscellanea

bookest provides also other little shortcuts, which can be useful when using the class and that are hereby listed:

## 5.1 Commands

`\setbibname{<name>}` renames the bibliography title to `<name>`;  
`\setcontentsname{<name>}` renames the contents title to `<name>`;  
`\ppar` inserts a vertical space of `1.5ex` — useful for example with the `noparskip` option;  
`\dimstleftskip` sets `\leftskip` to `1cm`;  
`\UCase` provides the command `\MakeUppercase`, that is instead redefined as a null command to make heading and footer commands more flexible;  
`\epigraph{<text1>}{<text2>}{{<environment>}}{<l>}` makes an epigraph, where `<text1>` is divided from `<text2>` by a horizontal line of color `B`. The epigraph has length `<l>` and is contained in the environment `<environment>`.

## 5.2 Environments

`abstract` is an environment of width `0.9\textwidth`, with a parameter `<title>` to be written in bold series before the text contained in the environment;

`dimst` is an environment where the text is in `s1shape` and with `1 cm` extra for the left margin.

## 6. Contacts

For comments, suggestions or bug reports, you can contact me at the address `bresciani@sssup.it`.
