

The **pbsheet** class*

Djalil CHAFAI

<http://www.lsp.ups-tlse.fr/Chafai/>
djalil DOT chafai AT laposte DOT net

February 14, 2004

1 Introduction

The **pbsheet** L^AT_EX 2_& class is designed to simplify the typesetting of problems sheets with Mathematics and Computer Science content. It is intended to simplify teachers work. The author uses it for his French Agrégation teaching activities, cf. <http://www.lsp.ups-tlse.fr/Chafai/agregteam.html>. Also, only the French language is handled in the current version of **pbsheet**. An example is provided, in French too. Please be patient.

2 Usage

In the future versions of **pbsheet**, I will put here the description of all the macros and environments provided by **pbsheet.cls**. However, the example provided is very explicit and will help you a lot.

3 Remark on EPS and PDF graphics

To add a Bounding Box to an EPS file, one can use the **epsffit** program:

```
epsffit -c llx lly urx ury oldfile.eps newfile.eps
```

The **epsffit** binary is provided by the Debian package **psutils**. To convert an EPS file to a PDF file, one can use the **epstopdf** program:

```
epstopdf file.eps
```

which produces **file.pdf**. The **epstopdf** binary is provided by the Debian package **tetex-bin**.

4 To do for next version

- Translate everything in English, including the Matlab files;
- Add Scilab examples;

*This document corresponds to **pbsheet v0.1**, dated 2004/02/14, .dtx pbsheet file.

- Check for packages versions (recent listings for Scilab for example);
- Add automatic inclusion of macros via a suitable class option;
- Add multilingual support via Babel;
- Provide more examples;
- Enhance the help file generated via `pbsheet.dtx`. Add documentation for macros and environments;
- Provide scripts for EPS to PDF conversion;
- Modify the `\bibliography` macro to automatically extract the BibTeX `.bib` filename by using the `.tex` filename of the `TEX` file. This will ensure interoperability with AUCTeX/RefTeX/BibCite.

5 Implementation

```
